

Self-study Assignment

Week – 13

1. Temperature Conversion

Problem Statement:

Write a Python program to convert a given temperature in Celsius to Fahrenheit. The conversion formula is:

$$\text{Fahrenheit} = (\text{Celsius} * 9/5) + 32$$

Solution :

```
celsius = 25
```

```
Fahrenheit = (celsius * 9/5) + 32
```

```
print("Temperature in Fahrenheit:", Fahrenheit)
```

2. BMI Calculator

Problem Statement:

Calculate Body Mass Index (BMI) using the formula:

$$\text{BMI} = \text{Weight (kg)} / \text{Height (m)}^2$$

Solution :

```
weight = 70 # Weight in kilograms
```

```
height = 1.75 # Height in meters
```

```
# Calculate BMI
```

```
bmi = weight / (height ** 2)
```

```
# Output the result
```

```
print("BMI:", round(bmi, 2))
```
